To the recruitment team

Cover letter

Dear recruitment team,

I would like to apply for opportunities in distribution and logistics planning. I am an industrial engineer whose experience connects logistics operations with data analysis.

At Embol, I have progressed from fleet management to distribution planning and, now, nationwide operational analysis. I work with logistics information, Power BI dashboards and indicators that help track routes, resources and deliveries.

My experience includes route and load balancing in La Paz and El Alto, as well as rural fleet sizing. Knowing operations from the ground helps me understand what teams need and turn that context into useful planning analysis.

I am pursuing a master’s degree in Data Science and Artificial Intelligence at UAGRM, with applied research into dynamic last-mile routing. I want to contribute this combination of operational experience, data tools and a willingness to keep learning.

Thank you for your time. I would welcome a conversation about your team’s needs and how my experience could contribute to your operations.

Kind regards,
Rodrigo Alejandro López Flores
